Friday, April 10th

Take a look outside! Have you noticed the increased bird activity?

The male Northern Cardinal is easy to spot because he is bright red and his call sounds like a sci-fi laser beam going “Pew-Pew!” See if you can find one in your neighborhood! Record it in your science journal. The female Cardinal looks similar but is grey and light orange.

Monday, April 13th

Way before cell phones and even film cameras, early scientists had to draw everything they observed as a way to record observations.

Try your hand at drawing something from the natural world in a realistic, detailed, “still life” 2D drawing. Start with something simple like a leaf, a rock, an insect, or flower. If you can’t sit outside for that long, take a picture or image from the web and try to copy that for practice. Use a pencil for shading. Color it if you like!
